PROFILE

Backend Developer with hands-on experience building and deploying production-ready web applications using Python and Django. Experienced in designing RESTful APIs, working with PostgreSQL, and implementing authentication and business logic for scalable systems. Proficient in containerization with Docker and deploying applications to AWS EC2 with Nginx, Gunicorn, and HTTPS configuration. Familiar with CI/CD workflows and infrastructure fundamentals required for cloud-based environments. Focused on writing clean, maintainable code and building backend systems aligned with real-world performance and scalability requirements.

WORK EXPERIENCE

Freelance Backend Developer

2030 - PRESENT

Self-Employed | Remote

- Developed and maintained backend systems using Python and Django for web-based applications.
- Designed and implemented RESTful APIs, authentication flows, and database schemas using PostgreSQL.
- Deployed applications to AWS EC2 with Nginx, Gunicorn, Docker, and HTTPS configuration.
- Managed server setup, environment configuration, and basic CI/CD workflows.
- Collaborated directly with clients to gather requirements, define technical scope, and deliver scalable solutions.

Ambassador — BigFuture

- Represented the BigFuture initiative within the local student and community. 2024 - 2025
- Promoted educational and professional development opportunities.
- Organized and participated in informational sessions and outreach activities.
- Acted as a bridge between the platform and students by facilitating awareness and engagement.
